

IMPROVED THYROID HORMONE FORMULATIONS

Abstract of the Disclosure

- 5 A method is disclosed for formulating a solid dosage of thyroid hormone, while avoiding instability caused by interaction of the active ingredient with excipients. The thyroid hormone may be levothyroxine sodium or triiodothyronine. The method comprises depositing the active ingredient, preferably electrostatically, as a dry powder substantially free of excipients, onto a pharmaceutically acceptable polymer substrate.
- 10 Solid pharmaceutical dosage forms also are disclosed.
